By **JAKE MAXWELL WATTS** and **NEWLEY PURNELL**

Updated April 24, 2016 10:20 p.m. ET

Digital Philadelphia (September 2015)

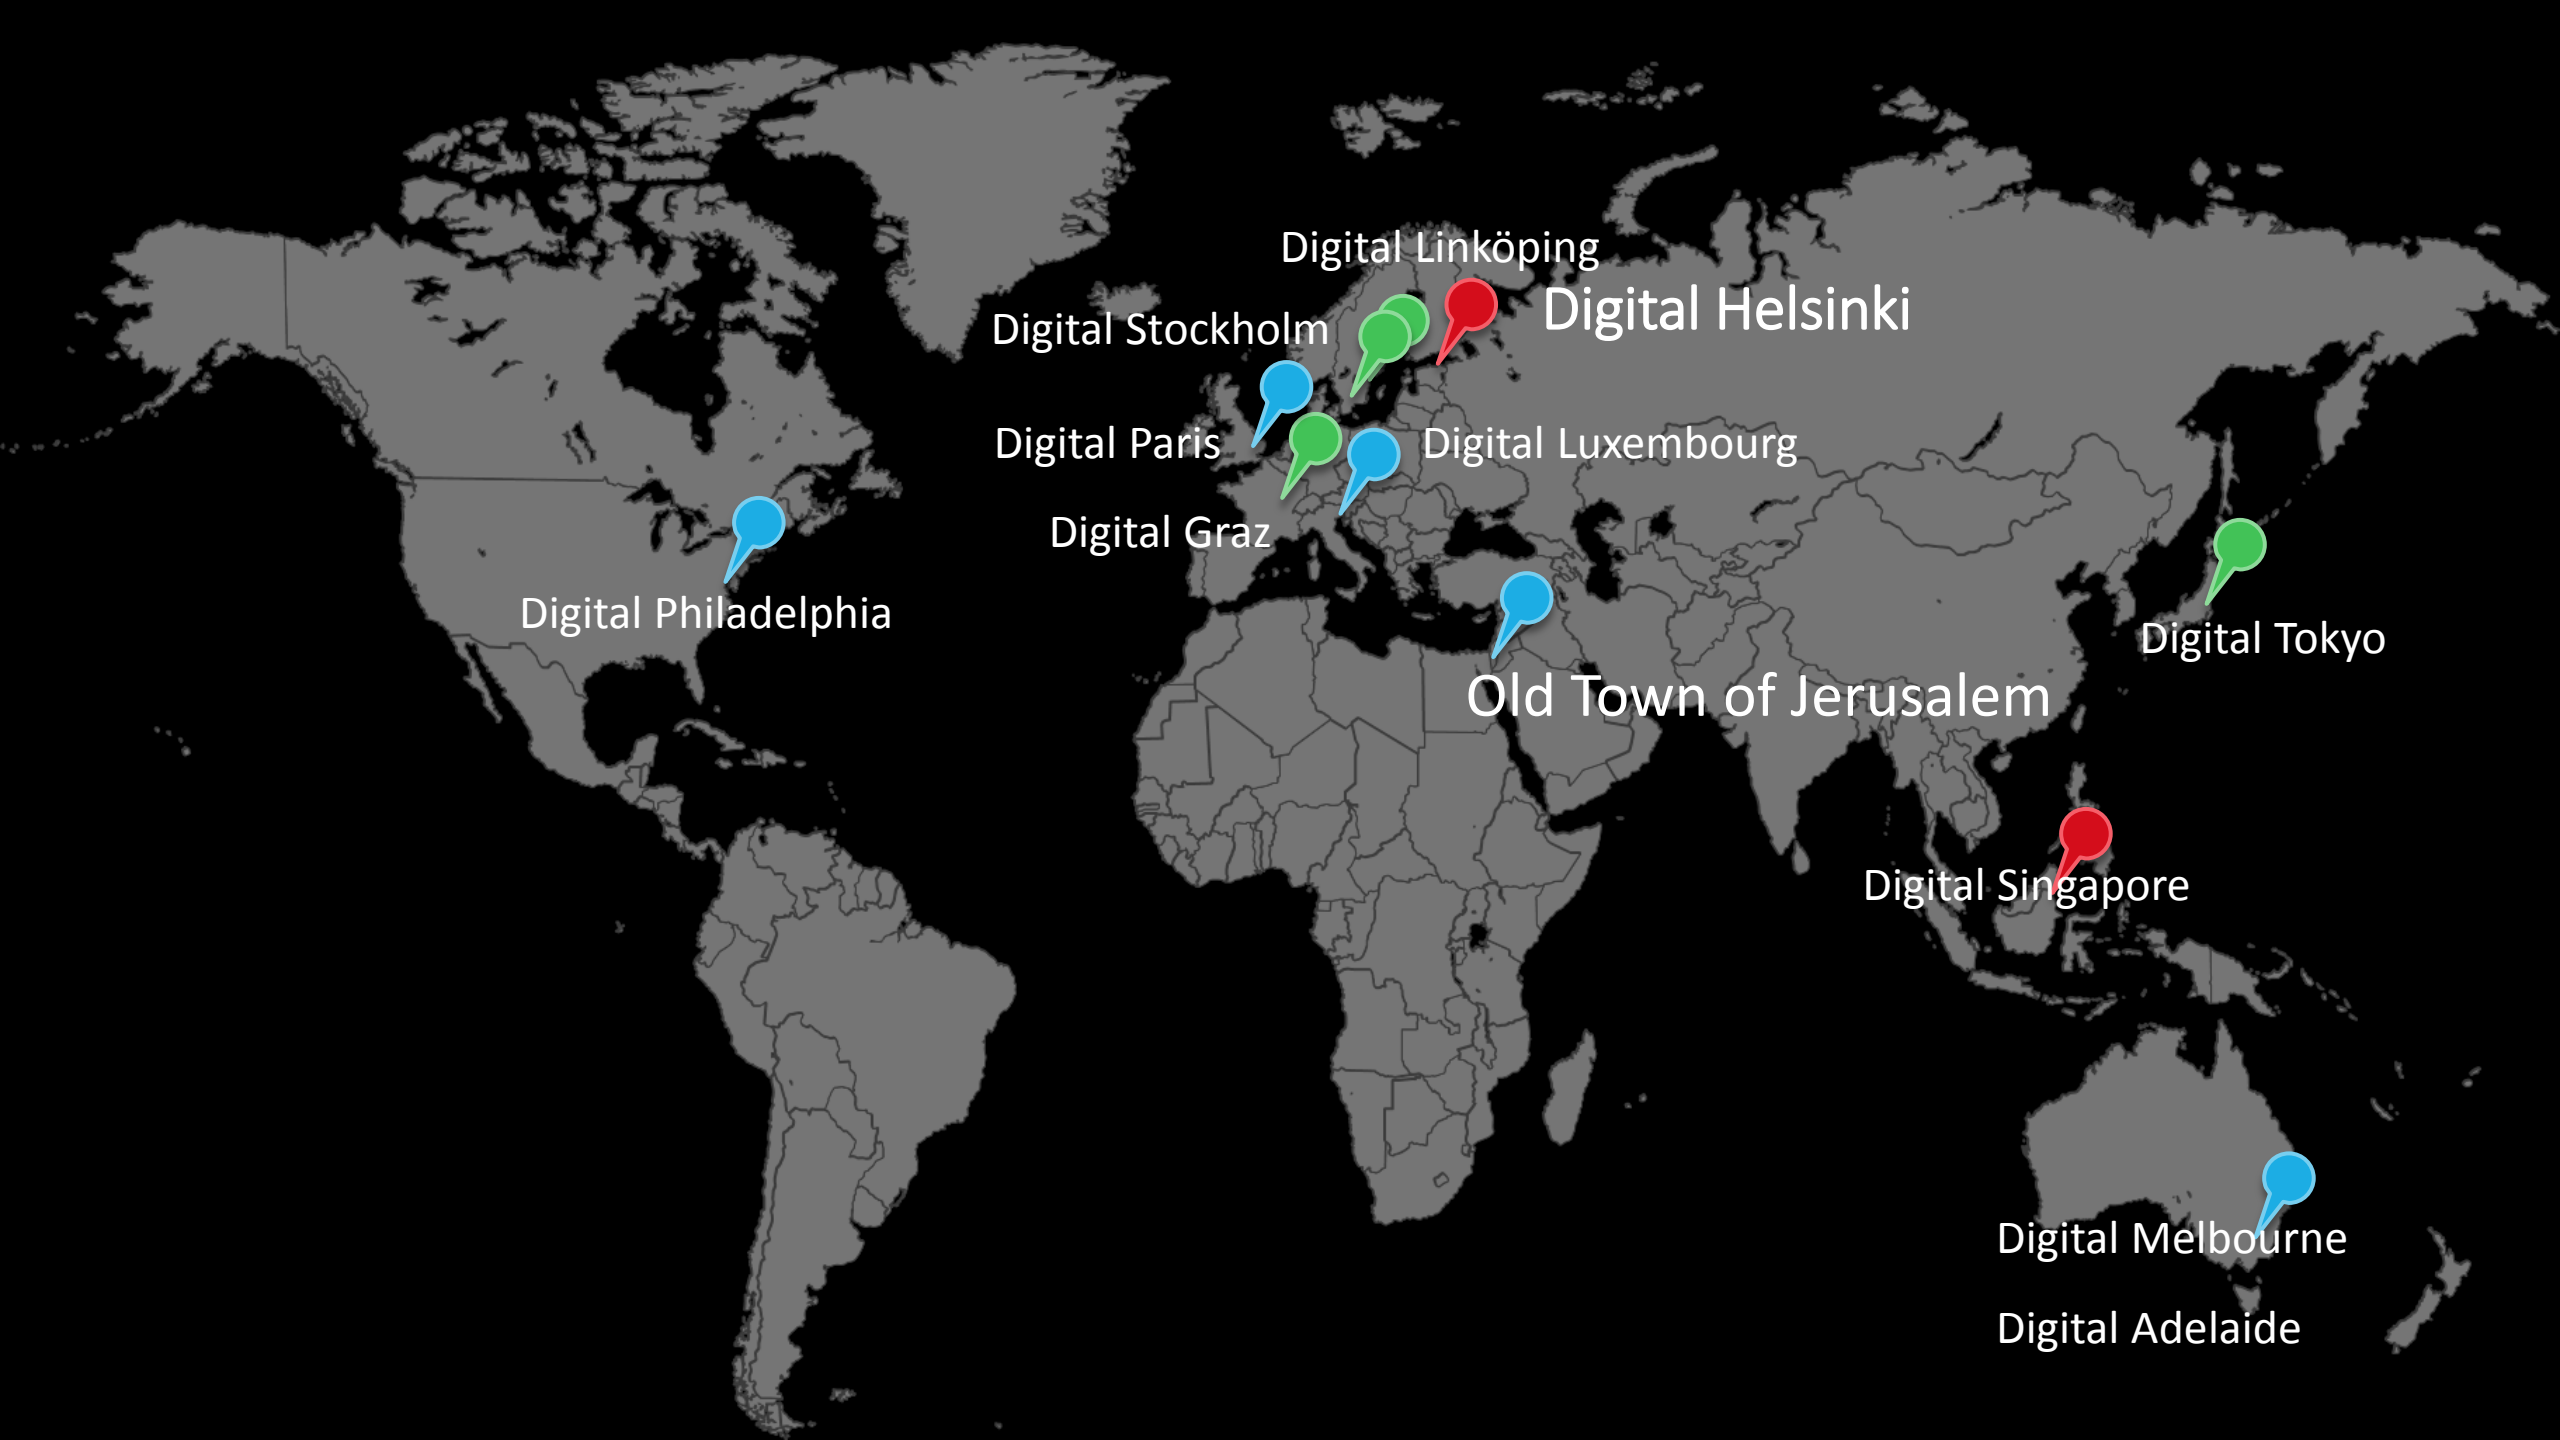

Digital Philadelphia

Why Digital Cities are appearing?

- The city wants a 3D model to use for GIS projects and communication
- They want to increase the frequency and level of details of the modeling at affordable cost what is not achievable by traditional methods (procedural lacks details and manual takes too long and is too expensive)
- The city has a project to publish models on a web portal either public (for citizens) and/or for professionals (contractors)
- Some cities just want their Central Business District to be reconstructed at very high resolution (Melbourne, Adelaide, Philadelphia...)
- Some others want their complete city + suburbs (+smaller villages in their vicinity) (Stockholm, Paris, Marseille...)

Digital Linköping

Digital Adelaide

How about Digital Vilnius?

Solution for Digital Philadelphia

Automatic Aero Triangulation (Magic)

- 3D modelio sudarymas iš fotonuotraukų
 - Finding Tie Points in photos
 - Same Tie Points found in several photos
 - Relative position and view direction of photo is calculated
 - 3D mesh is generated with textures from photos

Small Objects – Hand-held Camera

Underground Surveying

Prototype of Digital Vilnius

Pilot Project at Vilnius Gediminas Technical University Campus

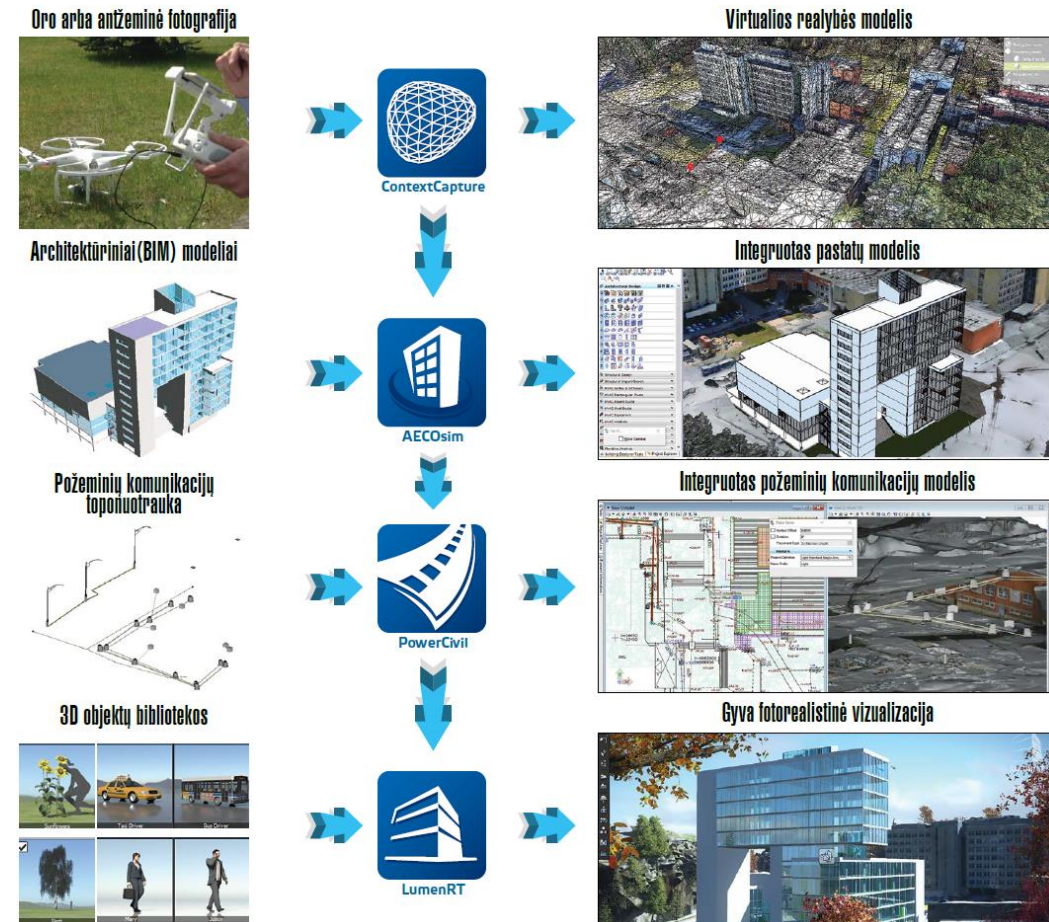

Participants:

- VGTU Centre Technologies of Digital and Information Modeling of Buildings
- VGTU Department of Surveying
- Institute of Space Science and Technologies
- IN RE

Results:

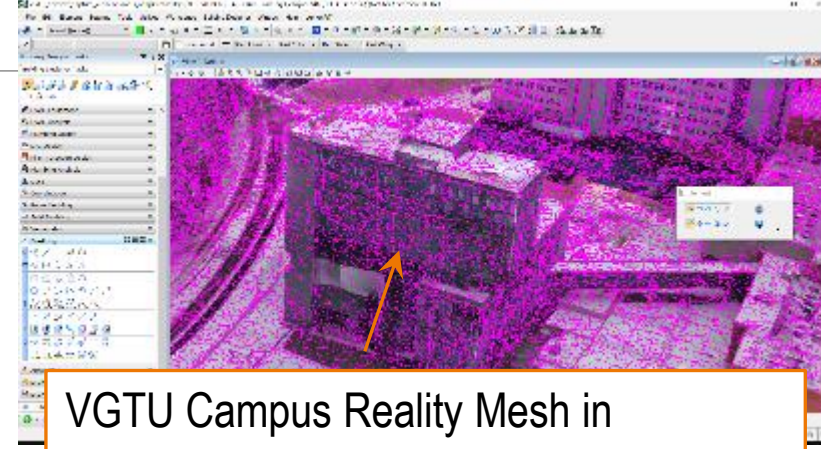

- Reality Model of Campus - a Prototype of 3D City - generated
- Integration of BIM Models with Context of Reality tested
- Reconstruction of 3D Subsurface Utilities tested
- Live photorealistic visualization prepared
- Model for 3D Printing created

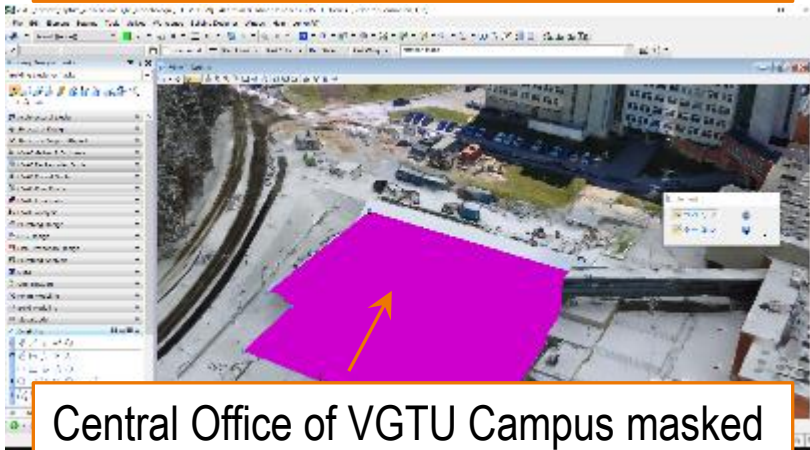

Reality Modelling Pilot Project

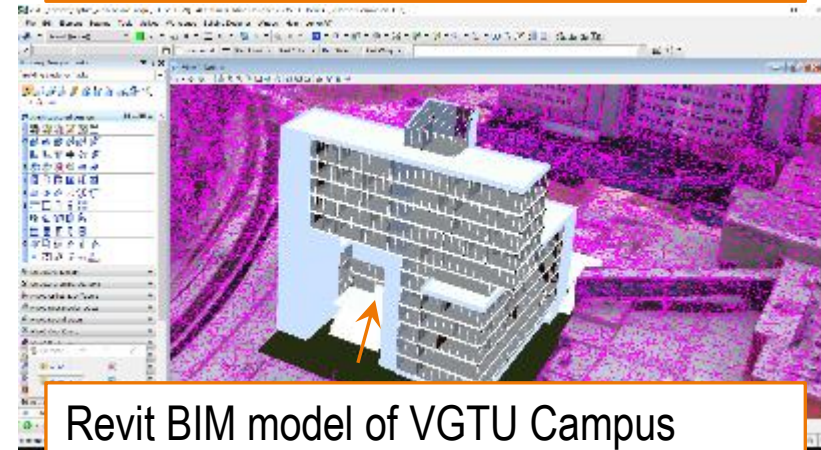

VGTU Campus Reality Mesh made with Context Capture and opened in Web App

VGTU Campus Reality Mesh in AECOsim Building Designer SS4

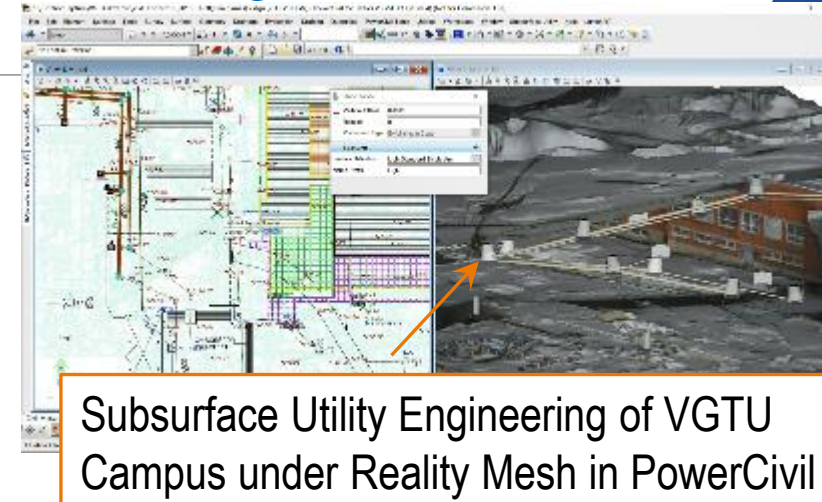

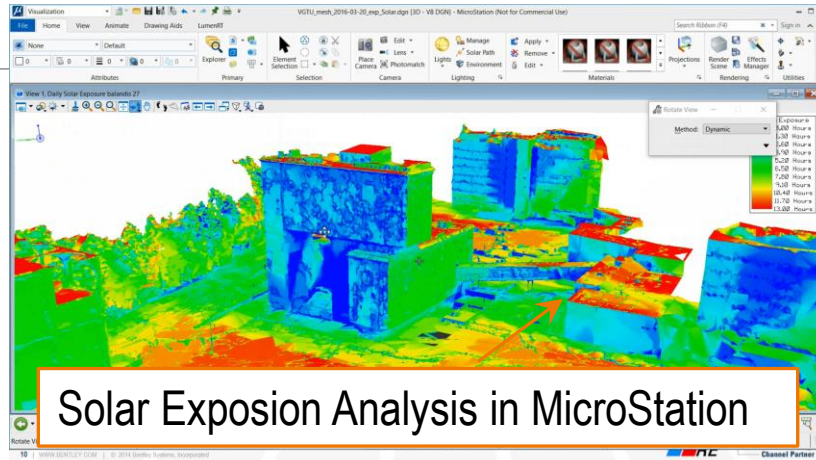

Central Office of VGTU Campus masked out from Reality Mesh with MRMESH MASK command

Revit BIM model of VGTU Campus Central Office, imported into AECOsim through IFC format

Modeling of 3D Cities - Facts

Sakae district, Nagoya, Japan

Dataset : 552 21Mpix aerial vertical and oblique photographs

Computation : 20 hours on 3 computers

Area : 0.5 km²

Resolution: 5 cm / pixel

Output: 3D DSM

Paris (subset), France

Dataset : 8000 aerial vertical (210Mpix) and oblique (80Mpix) photographs

Computation : 4 days on 10 computers

Area : 100 km²

Resolution: 7-8 cm / pixel

Output: 3D DSM

Marseille, France

Dataset : 15470 aerial vertical (210Mpix) and oblique (80Mpix) photographs

Computation : 12 days on 10 computers

Area : 200 km²

Resolution: 5-7 cm / pixel

Output: 3D DSM

CITY MAPPING

STOCKHOLM – by BLOM

Area: 500 sq-km (~100,000 photos)

Resolution: 7-8 cm per pixel

Solution: ContextCapture Center with 4 Engines - 3 months (expected – 18 months)

Deliverable: Georeferenced Textured 3D mesh + True orthophotos

Price: ~150.000 EUR (~1/6 of expected budget)
